INTRODUCTION

Significant Factors Involved in Revised Series

Beginning with the January 1966 surveys of Employment, Average Weekly Wages and Salaries (72-002) and Man-Hours and Hourly Earnings (72-003), the data compiled in these surveys will be on a revised basis. This publication provides, on the revised basis, historical monthly and annual data from 1961-65 to enable users to assess the effects of these revisions on the data over a lengthy period of time.

The revision has encompassed four main changes, as follows:

1. The putting of employment indexes on a time base 1961=100 in place of the time base of 1949=100.
2. The compiling of all employment and payroll data on the 1960 Standard Industrial Classification, (1) which replaces the 1948 Standard Industrial Classification.
3. The introduction of a new definition of the reporting unit or establishment (1) as the operating entity capable of reporting all elements of basic industrial statistics, including employment and payrolls. The most significant effect of this refinement in definition has been, in a number of cases, to consolidate into single establishments activities which were previously classified to separate establishments.
4. The use of a revised system of geographic classification in which statistics below the provincial level are compiled for all significant urban areas using the census definition for all metropolitan areas and modified definitions of other urban areas. (2)

In addition, the definition of size cut-off for the Employment, Average Weekly Wages and Salaries Survey has been clarified. In place of establishments "usually having 15 or more employees" the definition has been restated as establishments with 20 or more employees in any month of the current period. This more definite criteria has little or no effect on the actual coverage of the survey. (3)

Some of the More Significant Changes in the Statistics

The revision has resulted in the shifting of some existing establishments from one industry to another industry, the consolidating of some existing establishments and the splitting out of new establishments. Over the past several years, all of the 35,000 establishments in the ESI Employment and Payrolls Survey have been thoroughly examined and the D.B.S. establishment concept and 1960 Standard Industrial Classification applied as consistently as possible to conform with other industry-classified statistics throughout D.B.S. Some of the more significant shifts and changes in employment and payroll statistics, as a result of these applications, are as follows:

1. The regrouping of the Iron and steel industry and Non-ferrous metals industry into the new industry classifications Primary metals, Metal fabricating and Machinery.
2. The shifting of some Highway construction (75,000 employees) from the Construction industry to Highway and street maintenance in the Transportation industry.
3. The regrouping of the Automotive industry from two industries (Motor vehicle manufacturing and Motor vehicle parts and accessories manufacturing) into three industries (Motor vehicle manufacturers, Truck body and trailer manufacturers, Motor vehicle parts and accessories manufacturers). This has involved a shift of some 5,000 employees.
4. The establishing of Knitting mills as a separate major industry group and its deletion from the Clothing industry. Some 20,000 employees were involved.

(1) For detailed description see 12-501 Standard Industrial Classification Manual.

(2) Detailed information on all urban area definitions is available on request.

(3) For complete definitions, see monthly publication 72-002 Employment, Average Weekly Wages and Salaries.

5. The separating of the Furniture industry, with approximately 28,000 employees, from the Wood products industry and making it a separate major group.
6. The shifting of Railway telegraphs, with some 10,000 employees, from the Railway transportation industry to the Communications industry.
7. Railway shops with approximately 16,000 employees, shifted from the Transportation equipment industry (and Durable Goods) to the Railway transportation industry.
8. Poultry processing established as a separate major group and taken out of the Meat products industry. This resulted in a 14-cent per hour difference in the average hourly earnings in the revised Meat products industry.
9. The Post Office, covering some 30,000 employees, has been included in the Communications industry. Previously it was part of Government service, not covered in Employment and Payroll industry statistics.
10. Naval dockyards, previously included in the Shipbuilding and repairing industry, are now part of National Defence, Government service, and are not covered in Employment and Payroll industry statistics. (1)
11. Some government construction activity, previously part of the Construction industry, is now part of Government service and not covered in Employment and Payroll industry statistics. (1)
12. Provincial forestry services, previously part of Government service, are now part of Forestry industry. Some 5,000 employees are involved.
13. The Public utilities division, involving some 70,000 employees and previously a separate industry division, is now part of the Transportation, communication and other public utilities division.
14. Some 12,000 employees in Milk pasteurizing plants were shifted from Retail trade to Food and beverages manufacturing.
15. Contract drilling and oil exploration industry was detached from the Oil and natural gas industry and made a separate major group.

This resulted in a 17-cent per hour difference in the average hourly earnings in the revised Oil and natural gas industry.

16. Lumber and building material, and farm machinery dealers were included in Wholesale trade, a shift from the Retail trade.
17. Both the Chemical industry and Electronic industry groups underwent significant changes in composition; detailed comment is available on request.
18. Some types of Sales Offices have been taken out of Trade and put into Manufacturing; this shift has involved some 35,000 employees.
19. The shifting of erection staffs employed by Structural Steel manufacturers from the Construction industry to the Fabricated structural metals industry; this involved some 2,000 wage-earners.

(Further comment on any of these changes may be obtained on request).

Second Historical Publication

It is planned to release, by the summer of 1966, a second historical publication which will contain monthly and annual revised series for the period 1957-60, with major series extended back to 1949 by linking. This will provide users with a further basis for comparison and at the same time a link with Census of Industry statistics which were revised back to 1957.

- (1) These government services will now be covered in Government Employment and Payroll Surveys.

In addition to historical data, the publication will include a comprehensive technical paper containing detailed descriptions of all aspects of the revised series.

Seasonally Adjusted Series

It has not been possible to publish revised seasonally adjusted employment indexes in this historical publication due in part to the technical requirement of sufficient monthly series to carry out the seasonal adjustment programme. However, as the revised monthly series are extended back from January 1961, the revised seasonally adjusted series will be calculated and made available. It may be possible to carry out this phase of the programme on the basis of 1961-65 data using newly developed programmes for seasonal adjustment.

Additional Industry and Urban Area Detail

In setting up this revision project, the data were programmed to provide full geographic and industry detail. This publication contains considerably greater industry detail than has previously been published in the regular monthly publications and additional detail is available upon request. The expanded urban data is available in the regular monthly publications and is available for 1961-65 on request. The monthly publications will also contain considerably expanded revised geographic and industry detail on a regular basis with much unpublished data available on request.

It is emphasized that if further clarification or comments are required for any specific series, users should get in touch with the Chief, Employment Section, Labour Division, Dominion Bureau of Statistics, Ottawa. We will do everything possible to enable you to shift to the revised series with a minimum of difficulty.

TABLE 1. Employment Indexes by Industry, for Canada, January 1961 - May 1965
